Prospect of Placing on Record A Fair Which Will Compare Favorably With Former Years.

The days of our youth were pleasont ils) 6, Their sweetness lingers still, But had we the power to call the m lack. Methods we should lack the will. For science has taken lengthe strides kines the old "Pod-Auger" days, And the bend of improvement we can be a thousand different ways.

The same strange force that lights our home.
Is used as a multy power,
And breaks the recurst of our old steeds.
With their ten good miles as hour,

Its the iclephone, that strange device. That heeds not time or space, Wa can talk with our far-off friends today As though wa were face to face. And thinh of the railways high in air,
Of the wires beneath the sea;
Of the grant inventions now on earth,
And the many yet to be.

There are achools of reform, toe, that are the a wise and homose plan; And all things tend in a l'hiristan war, Toward the good of the coming tous. There are homes for every orphaned welf That is left on time's bleak shore; And the poor and antirring ones of each Find always as open door.

Three things were not in our youthful deya-The world had not then learned. This by loving cars for our fellow men. The low in this Lord is earned.

Warm thanks are due to our thoughtful friends, And we pay the delit with pride; Heplag that they will face like this When we shall have stepped aride. Wa are leaving this earth-life, one by sine; Yet the ranks will not be this, For la | Loc of those who are going out There are others coming in.

Ha Srat makes a rough minister modeling wax, then a full niese statan in clay, from which a planter mould is taken and tha workmen to the rest. The het was in ponred inside the mould to the thinkness of a quarter of nn inck or so, backed ap with the remetted wax from old disused figures. Pfaishing the lace is the most delicate work. The eyes, of course, are of giass, and the lashes around them are planted one at a time with forcepa. The teeth, when the lips are to be opened, are exactly the same as those uned ky dentists to replace the natural ones. Human hair is so cheep just agw that it as longer pays to use angore or any of the other substitutes once employed. The cheep grades of real hair it is interesting to note, come from China, and nre grauine pigtalls in fact. The hair is all black and straigkt as a yrndstick at first, but it is kleenched and dyed in any that desired, and can be crimped more or less, though artists have nayer succeeded in making it look naturally wary.

Designers make a sharp distinction between the figures need for displays and advertising and those used for other purposes, musenme, for instance. "When you work for advertising," asid one, "the more beautiful and the less like anstare you get it, the better it is, but for a museum they like it better the less beautiful and the more like anture it is."
